SUMMARY

Owner of an Azure-hosted enterprise customer portal from architecture & roadmap to delivery direction for an external vendor development team. Contributing React/TypeScript changes to the portal front end and tracing defects through the C#/.NET backend. Designated internal administrator for a Sinequa AI enterprise search deployment. MS in Computer Engineering (machine learning specialization) in progress.

EXPERIENCE

Mitsubishi Power Americas

Orlando, FL

Digital Integration Engineer

Aug 2025 – Present

- Own the customer portal end to end — architecture, roadmap, and direction of an external vendor development team building on Azure, .NET, and React. 2,000+ active users across 300+ plants.
- Develop React/TypeScript changes to the portal front end and trace reported defects through the C#/ASP.NET Core backend and SQL Server data layer to isolate root cause.
- Direct an external vendor development team through more than a year of continuous delivery on the portal, owning sprint planning, backlog prioritization, and release acceptance.
- Designated internal administrator for the Sinequa AI enterprise search platform; trained end-to-end on platform setup and hold admin access across the Azure and Sinequa environments ahead of go-live.
- Monitor portal telemetry through Application Insights & communication channels and triage production issues, isolating faults across the application, database, and hosting layers.
- Translate customer analytics and business requirements into a prioritized backlog; run Agile ceremonies and release coordination across internal stakeholders and vendor engineers.

Customer Excellence Associate

Jan 2023 – Aug 2025

- Built a Voice of the Customer dashboard consolidating survey and service data into reporting used by leadership to prioritize product decisions.
- Owned all digital tooling and operations for the annual Mitsubishi User Group Conference, serving over 200 guests.

University of Central Florida

Orlando, FL

Graduate Research Assistant — Hardware Security

Jan 2024 – Jan 2026

- Investigated RowHammer fault-injection attacks against High Bandwidth Memory, implemented custom memory access engines in SystemVerilog on a Xilinx Alveo U280 FPGA (Vivado).
- Characterized bit-flip behavior across DRAM access patterns and presented findings to faculty and peer researchers.

Texas Instruments

Santa Clara, CA

Product Engineering Intern

Jun 2023 – Aug 2023

- Automated bench test procedures in LabVIEW and TestStand, reducing operator time by 80% and eliminating a manual measurement step across the test suite.

Encore Global

Orlando, FL

Lead Technician, AV / IT

Nov 2014 – Jan 2023

- Led audio and network operations for live events of up to 1,000 attendees; supervised crews of up to 25 technicians and owned LAN/wireless deployment and support.

PROJECTS

- **Containment Failure — Unity Game AI (6-person team).** Owned system integration and delivery for a Unity project combining multiple AI behavior systems; merged contributions from six developers into working builds. Developed core gameplay systems including the player controller and spawn director.
- **Self-Hosted Infrastructure Lab.** Operate a Proxmox host running containerized services (Home Assistant, Nextcloud, Ollama, Node-RED) behind a Tailscale mesh, with DNS filtering, reverse proxy, backups, and local LLM inference.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, C#, SQL, Python, C/C++, Java, SystemVerilog

Web & Frameworks: React, .NET / ASP.NET Core, REST APIs, HTML/CSS

Cloud & DevOps: Microsoft Azure, Azure DevOps, CI/CD pipelines, Git, Application Insights, SQL Server, Linux

Practices & Tools: Agile/Scrum, code review, requirements analysis, vendor management, Sinequa administration, Figma, Vivado

EDUCATION

University of Central Florida — M.S. Computer Engineering, Intelligent Systems & Machine Learning

Expected May 2028

University of Central Florida — B.S. Computer Engineering

Dec 2024

Valencia College — A.S. Sound and Music Technology

May 2017
